MASHAEL SAEED

Computer Science Student | Internship Candidate

Jeddah, Saudi Arabia | +966 54 654 6136 | mashaelfarhan84@gmail.com
LinkedIn | github.com/M1sh13l | m1sh13l.github.io/portfolio

PROFILE

Computer Science student at Effat University with practical academic experience in software development, artificial intelligence, data science, and cybersecurity. Built web applications, machine learning models, and database systems, and contributed to ICU mortality prediction research. An active IEEE technical team member who enjoys coding, collaborating, and helping others understand technology. Seeking a six-month internship beginning January 2027 to contribute to practical projects, learn new tools, and develop skills alongside experienced teams.

EDUCATION

Effat University | Jeddah, Saudi Arabia

BSc Computer Science, General Track | 2023–August 2027 expected
GPA: 3.95/4.00 | Dean's List: 2023–2024, 2024–2025, 2025–2026

TECHNICAL SKILLS

Programming: Python, Java, JavaScript, C++, SQL

Web and databases: HTML, CSS, PHP, React, Node.js, REST APIs, MySQL

AI and data: Pandas, scikit-learn, XGBoost, preprocessing, feature engineering, exploratory data analysis, model evaluation, recommender systems

Security and networking: Burp Suite, sqlmap, DVWA, Wireshark, OSINT, Cisco Packet Tracer, TCP/IP, VLANs, subnetting, routing

Development tools and methods: Git, GitHub, Linux fundamentals, UML, ER modeling, requirements analysis, SDLC, system architecture

ACADEMIC PROJECTS

EpiLoad — AI-Assisted Hospital Load Management | In Progress

- Contribute to defining requirements for patient prioritization, hospital capacity monitoring, and transfer coordination.
- Help design the system around patient risk and triage assessment, hospital load forecasting, and a recommendation and coordination engine.
- Explore datasets covering patient history, vital signs, symptoms, basic laboratory results, and hospital resource availability.
- Contribute to design documentation, prototype development, and planning capacity-based transfer recommendations.

ICU Mortality Prediction | Python, Pandas, scikit-learn, XGBoost

- Preprocessed structured clinical data and performed exploratory analysis to investigate patterns relevant to ICU mortality.
- Engineered features and developed classification models to predict patient mortality risk.
- Evaluated model performance using confusion matrices and ROC analysis.
- Contributed to documenting the methodology, experiments, and findings for the research paper associated with AICCSA 2026.

Tutorly and Tutor Recommendation System | PHP, MySQL, Python

- Developed tutor discovery, session booking, and session management functionality for a tutoring marketplace.
- Translated student, parent, and tutor needs into functional and non-functional requirements.
- Prepared requirements documentation and UML diagrams showing user roles, workflows, and system interactions.
- Contributed to database design and a layered architecture separating presentation, application logic, and data management.
- Prepared student and tutor data, engineered features, and developed recommendation and ranking workflows for personalized tutor matching.

Mental Health and Habit Tracker | PHP, MySQL

- Developed a web application for recording moods and tracking personal habits.
- Implemented user authentication and interfaces for entering and viewing user-specific records.
- Connected application features to MySQL for persistent storage and retrieval.
- Developed an administrative dashboard to support application management.

Blood Donation Management Database | SQL, MySQL

- Analyzed information requirements for donor records, blood inventory, and donation requests.
- Created an entity–relationship model and translated it into relational tables with keys and relationships.
- Implemented SQL operations to store, retrieve, update, and manage records.

Hospital Management System | C++

- Developed a C++ application to organize hospital records and support record-management workflows.
- Applied linked lists, stacks, and vectors to structure and process information within the application.
- Implemented record-handling logic using these data structures to support the system's management functions.

Data Analysis and Visualization | Python, Pandas

- Prepared and organized datasets in Pandas to support exploratory data analysis.
- Examined variable distributions, patterns, and relationships through data summaries and visual exploration.
- Created visualizations and documented observations to communicate findings and support interpretation.

RESEARCH

ICU Mortality Prediction Using Machine Learning: A Practical Framework for Risk Stratification

AICCSA 2026 conference research — contributed to a data science paper on machine learning for ICU mortality risk stratification.

LEADERSHIP AND EXTRACURRICULAR ACTIVITIES

Core Member, Technical Team | IEEE Club, Effat University

September 2026–Present

- Supported IEEE Day through technical demonstrations, equipment setup, booth assistance, project explanations, and participant support.
- Contribute to coding, code review, debugging, registration forms, and demonstration websites that help others visualize planned event spaces.
- Support preparations for a 24-hour student coding competition through code examples and software testing; help students troubleshoot coding and software issues.

COURSES AND CERTIFICATIONS

- Critical Thinking for Decision Making — Creo Incubator, October 2026
- Leading Teams: Building Effective Team Cultures — University of Illinois Urbana-Champaign, October 2026
- Mathematics for Machine Learning and Data Science Specialization — Coursera, April 2026
- Python for Data Science, AI & Development; Getting Started with Git and GitHub — IBM, April 2026
- Introduction to Containers (Docker & Kubernetes); Introduction to DevOps — IBM, April 2026
- Generative AI and LLMs: Architecture and Data Preparation; Fundamentals of AI Agents Using RAG and LangChain — IBM, October 2025
- Introduction to Software Engineering; Introduction to Agile Development and Scrum — IBM, October 2025
- Digital Safety and Security — Arizona State University, March 2024
- Python Data Structures; Programming for Everybody (Getting Started with Python) — University of Michigan, November and October 2023, respectively

VOLUNTEERING AND ACTIVITIES

145.5 recorded volunteer hours | 2023–2026

Participated in Effat University events, Saudi Equestrian Federation championships, Jeddah Municipality initiatives, Civil Defense awareness campaigns, and charitable activities. Activities included event organization, community meals, water distribution, public-space improvement, and safety awareness.

Memberships: IEEE Computer Society; Society of Petroleum Engineers (SPE).
